Executive overview

- The Q2 2026 Health Component workbook was reviewed against the live database at MDA, economic component, revenue, funding and aggregate-total levels.
- Q1 expenditure and revenue were preserved. The approved update replaced the former detailed Q2 health ledger with one aggregate expenditure row per non-zero MDA/component and one aggregate revenue row per positive-revenue MDA.
- Independent post-import reconciliation found zero differences across all 31 expenditure targets and all 10 revenue targets. Funding allocations fully balance the updated expenditure total.

Decision	Outcome	Control
Aggregate adjustment / replacement approved	Applied to live Supabase on 31 July 2026, 09:24 WAT	Transaction-guarded, idempotent and independently reconciled

1. Review Scope and Methodology

The review compared the workbook's authoritative Q2 MDA/component figures with the pre-update database state, checked Q1 preservation, and verified the approved replacement after posting.

Area	Review performed	Result
Workbook structure	Overview, revenue, total expenditure, personnel, overhead, capital and PHC summary sheets inspected.	Required health-component tables identified.
Q1 baseline	Live Q1 health expenditure and revenue totals rechecked before and after the Q2 operation.	No Q1 values changed.
Q2 expenditure	Former 313 ledger rows compared with 31 MDA/component workbook targets.	31/31 targets reconciled exactly to 2 decimals.
Q2 revenue	Former 26 revenue actuals compared with 10 positive MDA totals from the workbook.	10/10 targets reconciled exactly.
Funding	Operational funding and expenditure allocations checked after replacement.	41 funding rows; expenditure fully allocated.
Audit and recovery	Original Q2 expenditure and funding rows archived with snapshots and audit context.	348 archived rows remain recoverable.

Key interpretation

Capital expenditure is the principal driver of the adjustment, increasing by ₦26,629,513,735.36. Personnel increased by ₦0.00, while overhead increased by ₦1,296,264,077.19.

The workbook's displayed parent expenditure total rounds one kobo above the sum of the 2-decimal MDA/component targets. The database stores the auditable per-MDA total of ₦58,838,984,887.23.

Revenue classification note	Database treatment
The workbook does not split each MDA total between recurrent and capital receipt funding sources.	Each positive MDA total is stored as one explicit aggregate revenue actual. Its matching funding row is classified as Other to avoid inventing a source split.

Allocation balance	₦58,838,984,887.23	Allocated funding equals Q2 expenditure; no unallocated rows.

Important interpretation notes

- The workbook is authoritative for aggregate MDA/component totals; it is not a self-contained transaction-level ledger.
- All updated expenditure values are stored at two decimal places. The workbook's parent expenditure total contains hidden precision and visually rounds one kobo higher.
- Aggregate expenditure and funding entries use the programme area Other because the workbook does not provide a defensible programme split at the new aggregate level.
- Revenue funding is classified as Other because the workbook combines recurrent revenue and capital receipts without a source breakdown.
- Previous Q2 expenditure and funding rows were archived before replacement. The former revenue total and row count are retained in the completed import-batch summary and the original Q2 seed.

Conclusion

The approved Q2 2026 Health Component aggregate replacement is complete and reconciled. The live database now matches the workbook at every posted MDA/component and revenue target, Q1 remains unchanged, and the replaced Q2 ledger records remain recoverable through the archive.
